GEM HARNESSES[®]

Empower the

ignite

Autoways India, Manufactures of Ignition wire sets under the brand **GEM HARNESSES** is a well known name in the Indian after market. Build to match the OE's in length, diameter, terminal design and insulator position, **GEM HARNESSES** Ignition wire sets also offer a performance advantage over many after market products. High Quality special design coverings are used for increased durability as constant high voltage, heat, oil, grease exposure will eventually deteriorate ignition wire components and cause them to fail.

Special design Spiral conductors are used in wires to match OE's. These types of wires generally provide good suppression for both Radio Frequency Interference (RFI) and Electro Magnetic Interference (EMI). As both RFI and EMI are created when a spark plug fires. **GEM HARNESSES** ignition wire are solely kind of wires that can also be used in PETROL/CNG/ LPG gas vehicles.

Components of the cable:

- Wire** Premium jacketing for high temperature protection with multi strand graphite impregnated **fibre glass/Kevlar fibre** (Kevlar I Registered Trade Mark of **DUPONT CORP.**).
- Boot** The boots are strictly designed to safeguard from high temperature and moisture.
- Terminals** The Stainless Steel Spark plug terminals for high electrical conductivity , Anti Rust and stable connection even after many spark plug changes.

Buy using **GEM HARNESSES** you
Save Fuel and Save Money
